1 Introduction

1.1 Read the manual
- Please read this manual carefully and completely before using the product.
- This manual is part of the product. Keep it in a safe and easily accessible location.

1.2 This is what operating instructions look like
1. - n. are placed before steps that must be done in sequence.
    ▶ is placed before a step.
    ▶ describes the result of a step.

1.3 This is what lists look like
- indicates an item in a list.

1.4 This is what menu items and softkeys look like
[ ] frame menu items and softkeys.
Example:
[Start]- [Applications]- [Excel]

1.5 This is what the safety instructions look like
Signal words indicate the severity of the danger involved when measures for preventing hazards are not followed.

⚠ DANGER
Warning of personal injury
DANGER indicates death or severe, irreversible personal injury which will occur if the corresponding safety measures are not observed.
▶ Take the corresponding safety precautions.

⚠ WARNING
Warning of hazardous area and/or personal injury
WARNING indicates that death or severe, irreversible injury may occur if appropriate safety measures are not observed.
▶ Take the corresponding safety precautions.

⚠ CAUTION
Warning of personal injury.
CAUTION indicates that minor, reversible injury may occur if appropriate safety measures are not observed.
▶ Take the corresponding safety precautions.
NOTICE

Warning of damage to property and/or the environment.

NOTICE indicates that damage to property and/or the environment may occur if appropriate safety measures are not observed.

➢ Take the corresponding safety precautions.

Note:

User tips, useful information, and notes.
2 Safety instructions

2.1 General safety information

Follow these safety precautions:

- The equipment may only be used as intended for weighing tasks.
- The device may only be opened by authorised personnel.
- Observe the operating limits of the device.
- Ensure that the supply voltage at the installation site matches the AC input voltage indicated on the data label.
- Avoid shock stress (falling down, hard shocks, falling loads, any impact from the side).
- Do not use the equipment in hazardous areas and unstable environments.
- Do not expose the equipment to aggressive chemical vapors or to unnecessarily extreme temperatures, moisture, or vibration.
- Unplug the device before you connect or disconnect any electronic peripheral devices to or from the interface port.
- Unplug the power cord from the mains supply before cleaning.
- Make sure that no liquid enters the equipment.
- Do not use loads that exceed the capacity of the scale.

2.2 Incoming goods inspection

The shipment must be checked for completeness. A visual inspection must be performed to determine if the shipment has been damaged. If there are grounds for a complaint, this must be brought to the attention of the delivery company immediately. A Minebea Intec sales or service point must be informed. Visit our website [http://www.puroscales.com](http://www.puroscales.com) or contact your dealer.

2.3 Before operational startup

**NOTICE**

Perform visual inspection.

Before operational startup as well as after storage or transport, inspect the product visually for signs of mechanical damage.

- The product may not be put into operation if it has visible damage and/or is defective.
3 Device installation

3.1 Package Contents
- Scale
- Sub-platform
- Safety Instructions and QR code with access to the detailed documentation
- Pan
- USB power supply and cord

3.2 Requirements on location
- Set up the device on a stable, even surface.
- Position the device so that the power plug is freely accessible and the power cord is not an obstacle or trip hazard.
- Avoid placing the device in close proximity to a heater or otherwise exposing the scale to heat or direct sunlight.
- Do not expose the device to excessive temperature fluctuations.
- Protect the device from drafts that come from open windows or doors.
- Avoid exposing the device to extreme vibrations during weighing.
- Protect the device from aggressive chemical vapors.
- Do not expose the device to extreme moisture over long periods.

NOTICE

Acclimatizing the device
Condensation can form on the surfaces of a cold device when it is brought into a substantially warmer area.
➤ Unplug the device from the power supply and allow it to acclimatize for about 2 hours at room temperature.

3.3 Leveling the equipment

Purpose:
- to compensate for unevenness at the place of installation
- to ensure that the device is placed in a perfectly horizontal position for consistently reproducible weighing results

Always re-level the device any time after it has been moved to a different location.
➤ Level the scale using the four leveling feet.
➤ Ensure that all leveling feet make contact with the floor.
➤ Turn the feet until the air bubble is centered in the level indicator.
➤ Each of the leveling feet must support an equal load.
3.4 Power supply

AC power is used to power the scale when battery power is not needed.
Plug the USB-C plug into the USB-C jack on the bottom of the unit, then plug the AC power supply into a wall outlet.

Note:
Do not use the USB-C power supply cable for the PC communication. Instead use a standard USB-C cable.

3.4.1 Battery Power

The scale can be used on AC power immediately. Allow the battery to charge for 12 hours before using the scale on battery power. The Scale will automatically switch to battery operation if there is a power failure or the power cord is removed. With AC power, the scale is constantly charging, so the battery charge indicator (see Chapter 4.1.1.2) will remain lit. The scale can be operated during charging, and the battery is protected against overcharging.
When the device is switched on, the battery status LED lights red while the battery is charging and green when the battery is fully charged.
For maximum operating time, the battery should be charged at room temperature.
During battery operation, the battery symbol indicates the battery charge level remaining. The indicator will automatically turn off when the batteries are empty.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Charge level</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0 to 10 % Remaining</td>
</tr>

</tr>
<tr>
<td></td>
<td>41 to 70 % Remaining</td>
</tr>
<tr>
<td></td>
<td>71 to 100 % Remaining</td>
</tr>
</tbody>
</table>

Note:
When battery symbol blinks fast, approximately 30 minutes working time is left.
When [lo.bat] is displayed, the scale will shut off.
Charging the scale must be performed in a dry environment.
3.5 Connect printer

A printer can be connected to the printer port on the underside of the device.

</table>

**Note:**

Some modes / units may not be available in all models.

**LED indicators**

When the device is switched on, the battery status LED (1) lights red while the battery is charging and green when the battery is fully charged.

The colored LED indicators (2) on the right side of the control panel are used in Check mode (see Chapter 5.2.4) and will light up according to the following rules:

- (Red) Weight value > upper tolerance limit
- (Green) Weight value ≤ ≥ is within OK range
- (Yellow) Weight value < lower tolerance limit
### 4.1.1.3 Operating elements

</tr>
</tbody>
</table>
4.1.1.4 Rear Display

The models LargeTall (LT) and SmallTall (ST) have an additional rear display, which shows the same display elements as the front display. (See Chapter 4.1.2).
5 Operation

5.1 Basic Weighing Function

5.1.1 Turn on the device

> Press the \( \text{On} \) button.

▷ All elements of the display are shown for 2 seconds.

All Checkweighing LEDs are on for this time.

The software version number is displayed for 2 seconds.

The latest active (selected) application before the last switch-off will be started. If the application has already been initialized, it starts with these parameters.

If the scale is turned ON for the very first time then applications "Weighing" plus "Totalizing" (manually) are active.

5.1.2 Turn off the device

> Press and hold the \( \text{Off} \) button until [OFF] is displayed.

▷ The display shows [- OFF -] for about 1 second.

The device switches off, display is dark.

5.1.3 Adjust GEO setting

Adjust the GEO setting according to your location to ensure accurate weighing results. See Chapter 7.3.

5.1.4 Select an application

> Press and hold the \( \text{Mode} \) button.

▷ The application names are displayed every 2 seconds until the \( \text{Mode} \) button is released.

If the \( \text{Mode} \) button is released, the displayed application is selected and starts.

Possible applications are:

<table>
<thead>
<tr>
<th>[WEIGHT]</th>
<th>normal weighing mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>[PERCNT]</td>
<td>percentage mode</td>
</tr>
<tr>
<td>[COUNT]</td>
<td>count mode</td>
</tr>
</tbody>
</table>
5.2 Application Programs

5.2.1 Weighing Mode

Display the weight of the sample in lb, oz, lb:oz, kg or g.

1. To select the weighing mode, press and hold the \( \text{MODE} \) button until [WEIGHT] is displayed with application icon \( \text{応} \) appear at bottom of the screen.

Release the button. The application is activated.

\( \text{[0.000]} \) is displayed.

2. Place container on the scale (in this example, 0.598 kg).
5.2.1.1 Stability

If a weighing value is stable, the unit symbol is displayed.

Stable weighing value:

Unstable weighing value:

Stable gross weighing value below zero (no unit visible):

If the gross weight is 20d below zero, [L] is displayed.
If the gross weight is >7d above Maxload, [H] is displayed.

5.2.1.2 Taring

For taring the container on the scale, press the button if the pan is loaded.

[T] is shown on the display.

Tared value:

5.2.1.3 Weight Unit switch

You can toggle the display of a weight value between different weight units.

To select the weight unit, press the button until the desired weight unit is displayed, when these units are activated in menu before. [kg / g / lb /oz / lb:oz].
Release the button to select.

Possible units are:

| gram      | [g]    |
5.2.1.4 **Negative weighing value**

Negative stable netto weight value is displayed like this:

![Negative weight display]

5.2.2 **Percent Mode**

Display the weight in percent of the reference weight.

Example: Determine an unknown percentage; store the weight on the scale as the reference percentage (100%).

1. To select application Percent, press the **Mode** button, until [PERCNT] is displayed with application icon % at bottom of the screen.

   ![Percent mode selection]

   Release the button. The application is activated.

   ▶ If there is already a reference weight for 100% initialized, [CLR.REF] is displayed. Otherwise [PUT.REF] is displayed, then go on at step 5.

2. Press the **(No)** button to use the stored reference weight. Go on at step 8.
3. Press the **(Yes)** button to set a new reference weight.
4. [PUT.REF] is displayed.

   ![Reference weight selection]

5. Put the desired reference weight on the pan.
6. If a weight is put on the pan, press the \( \text{On} \) (Yes) button. If there is more than 1d on the pan, the pan is loaded.
   ▶ If the weight on the pan is \( \geq 100\% \) reference weight \( \times d \) AND \( \geq 2d \) [LOW.REF] is displayed for 2 seconds. Go on at step 7.

   ![REF.OK](image)

   If the weight on the pan is \( < 100\% \) reference weight \( \times d \) AND \( \geq 2d \) [LOW.REF] is displayed for 2 seconds. After that go on to step 8, otherwise go to step 7.

   If the desired weight isn’t put on the pan or the desired weight is smaller than 2d and the \( \text{On} \) (Yes) button is pressed, [REF.ERR] is displayed for 2 seconds. After that go to step 5.

   ![REF.ERR](image)

7. Application is initialized. Display shows [100\%]. Reference weight is stored permanently.

![100\%](image)

8. Replace the reference material with the sample material.
   ▶ The display shows the percentage of the sample compared to reference weight.

![70.4\%](image)

9. To view the current reference weight (in this example, 0.580 kg) press the \( \text{F} \) button briefly.
   ▶ The scale will display [REF.WT] and the reference weight value.
5.2.3 Counting Mode

Counting items based on the weight of a reference sample count.
Example: Determine the number of parts; weigh in the selectable reference sample quantity (in this example: 20).

1. To select application Count, press the MODE button, until [COUNT] is displayed with application icon at bottom of the screen.

2. Release the button. The application is activated.

3. Press the UNIT (No) button to use the stored reference weight.

4. Press the UNIT (Yes) button to clear the stored PW (average piece weight) and set a new one.

5. [PUT 20] (for example) is displayed.

6. Choose the desired reference quantity sample by pressing the MODE button briefly (decrement) or the UNIT (No) button briefly (increment) to toggle the choices (10, 20, 50, 100, 200).

7. Press the UNIT (Yes) button to confirm reference sample quantity.
8. If the pan is empty, then [PUT.PW] (put reference) is shown on the display. Put the desired reference quantity on the pan and go on at step 7.

```
| PUT.PW |
```

9. Press the [EXIT] (Yes) button to store the reference quantity sample.

▷ The display shows [PW.OK] (piece weight ok) for 2 seconds. Go on step 10.

```
| PW OK |
```

If there are no reference samples put on the pan or the weight is smaller than 2d or the calculated piece weight would be smaller than \( \frac{2d}{10} \), the display will show [REF.ERR] for about 2 seconds and then goes back to step 9.

```
| REF.ERR |
```

If the weight on the pan is \(<\) reference quantity \(\times\) d AND also calculated piece weight \(\geq\) \(\frac{2d}{10}\), then the display will show [LOW.REF] for about 2 seconds.

Example: PUT 50 ; \(d = 0.2\) g ; weight on the pan = 2.0 g ; then [LOW.REF] is displayed. But is the weight on the pan = 1.8 g, then [REF.ERR] is displayed.

10. Counting is initialized. On the display, the actual number of pieces is shown: [20 pcs] for example.

```
| 20 pcs |
```

11. Replace the reference sample with the test sample.

▷ The display shows the quantity of the sample count.

```
| 108 pcs |
```
5.2.4 Check Mode

Counting items based on the weight of a reference sample.
The scale supports positive, negative and zero check weighing.

| Positive Check | To determine when the material added to the scale is within the target range.  
|                | In this case the limit values UNDER and OVER must both be positive values.  
|                | **The OVER limit must be greater than the UNDER limit.**  
|                | Add material to the scale until it is within the ACCEPT (green) range.  |

| Negative Check | To determine when the material removed from the scale is within the target range.  
|                | In this case the limit values UNDER and OVER limits are negative values.  
|                | *(The UNDER limit must be greater than the OVER limit, i.e. UNDER = -10 / OVER = -15).*  
|                | Place the item to be weighed on the scale and press [-Te-].  
|                | Remove a portion of the item until it is within the ACCEPT range.  |

| Zero Check     | For comparison of subsequent samples with an initial reference sample.  
|                | In this case, the UNDER limit must be negative value and the OVER limit must be positive value or zero.  
|                | Place the reference item on the scale and press [-Te-].  
|                | Remove the reference sample and place the item to be compared on the scale to determine if it is within the ACCEPT range.  |

Checking for exact one piece or percentage weight value is also possible. Enter for the low AND high limit the same value.  
The different check modes must be activated prior via menu (see Chapter 6.2.1).

5.2.4.1 Check Weighing Mode

Compare the weight of items to a targeted weight range.  
Example: The required target weighing range is between 1 kg (low limit) to 1.1 kg (high limit)
Note:
Activation of this mode must be done prior via menu. See Chapter 6.2.1.

1. To select application Check Weighing Mode, press and hold the Mode button until [CHECK] is displayed with application icons □□ and ± at bottom of the screen. Release the button. The application is activated.

2. Press the Unit (No) button to use the stored limits. Go on at step 11.
3. Press the Off (Yes) button to set new limits.
   ▶ [SET.LOW] (set low limit) is displayed and the yellow LED for the low limit is on.

4. Press the Off (Yes) button to view the Low limit value.
   ▶ The Display will show stored low limit with all digits blinking [000.000] (in this example, 0.000 kg).

5. Press the Unit (No) button to edit the value.
   ▶ The first digit is blinking [00.000].

6. Press the Off (Yes) button to accept and highlight the next digit (or press the Menu (exit) button to go back one digit).
In case the check limit values are wrongly set,  [LIM.ERR] (limit error) will be displayed briefly followed by  [CLR.LIM] (clear limit).

The 2nd digit is blinking [0_0.000].

7. Press the + button to increase or the - button to decrease the digit value.
   ➤ The Display will show the low limit value with all digit blinking [001.000] (in this example, 1.000 kg).

8. Repeat until all the digits are correct.

9. Press the (Yes) button to accept the low limit value when all digits are blinking again.
   ➤ The scale will then display [SET.HI] (set high limit).

10. Same procedure like low limit setting.
    ➤ The Display will show the high limit value with all digit blinking [001.100] (in this example, 1.100 kg).

11. Press the (Yes) button to accept high limit value.
    In case the check limit values are wrongly set, [LIM.ERR] (limit error) will be displayed briefly followed by [CLR.LIM] (clear limit).
The scale is ready for check weighing application with new checklimit.

Go on at step 14.

| sample weight < target range | Yellow LED lights up. |
| sample weight within target range | Green LED lights up. |
| sample weight > target range | Red LED lights up. |

12. Repeat again the setup procedure.

13. Press the (Yes) button to establish new check limit value or press the (No) button to use stored check limit value.

14. Place container on the scale (in this example, 0.527 kg).

   Taring the container on scale.

15. Press the button with [NET] appear beside the weight value.

16. Place sample in the container.

17. To view the current check limit reference value (in this example, low limit value is 1 kg and high limit value is 1,100 kg), press the button briefly at anytime during check weighing process.

   The scale displays the low limit value with yellow LED light briefly and the high limit value with red LED light briefly.
5.2.4.2 Check Percent Mode

Compare the percentage of items to a targeted percentage range.
Example: The required target weighing range is between 95% (low limit) to 105% (high limit).

Note:
Activation of this mode must be done prior via menu. See Chapter 6.2.1.

1. To select the check percent mode or restart with a new reference weight or check limit, press and hold the Mode button until [CHECK] is displayed with application icons % and +/- at bottom of the screen.

Release the button. The application is activated.
▷ [CLR.REF] (clear reference) will then display.

If no reference weight exists, the scale will display [PUT.REF] (put reference). Proceed to step 4 if reference weight shall not be changed.

2. Press the (Yes) button to establish a new reference.
▷ The scale will now display [PUT.REF] (put reference).

3. Add the desired reference material to the pan or container.
4. Press the (Yes) button to store the reference weight.
   ▶ The scale will display [REF OK] for 2 seconds.
   The scale will display [CLR.LIM] (clear check limits).

5. Press the (No) button to use the stored check limits and proceed to step 14.

6. Press the (Yes) button to establish new check limits.
   ▶ The scale will then display [SET.LOW] (set low limit).

7. Press the (Yes) button to view the "low" limit value.

8. Press the (Yes) button to accept or press the (No) button to edit the "low" limit value.
   ▶ The stored value then displays with the first digit blinking [ _00.000%] (set low limit).

9. Repeatedly press the (No) button until the desired number appears (or press the (exit) button to go one digit back).

10. Press the (Yes) button to accept and highlight the next digit.

11. Repeat until all the digits are correct.

12. Press the button to accept the "low" limit value.
   ▶ [SET.HI] will be displayed.

13. Repeat the same procedure like low limit setting to accept or edit the "high" value.
   ▶ The Display will show the high limit value with all digit blinking [00105.0] (in this example, 105.0%).
14. Press the (Yes) button to accept high limit value.
   The scale is ready for check percentage application with new checklimit. Go on step 17.

15. Repeat again the setup procedure.
16. Press the (Yes) button to establish new check limit value or press the (No) button to use stored check limit value.
17. Place container on the scale (in this example, 55.0%).

18. For taring the container on the scale, press the button. [NET] appears beside the weight value.
19. Place sample in the container.

<table>
<thead>
<tr>
<th>Sample Weight Condition</th>
<th>LED Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sample weight &lt; target range</td>
<td>Yellow LED lights up.</td>
</tr>
<tr>
<td>Sample weight within target range</td>
<td>Green LED lights up.</td>
</tr>
<tr>
<td>Sample weight &gt; target range</td>
<td>Red LED lights up.</td>
</tr>
</tbody>
</table>

20. To view the current check limit reference value (In this example, low limit value is 80.0% and high limit value is 105.0%), press the **Mode** button briefly at anytime during check weighing process.

- The scale will display the low limit value with yellow LED light briefly and the high limit value with red LED light briefly.

5.2.4.3 Check Count Mode

Compare the quantity of items to a targeted quantity range.

Example: The required target quantity range is between 500 pcs (low limit) to 600 pcs (high limit)
Note:

Activation of this mode must be done prior via menu. See Chapter 6.2.1.

1. To select the check count mode or restart with a new reference quantity sample, press and hold the Mode F button until [CHECK] is displayed with application icons and +/− at bottom of the screen.

Release the button. The application is activated.

If there is already a piece weight initialized, [CLR.PW] (clear piece weight) is displayed.

2. Press the Unit (No) button to use the stored piece weight (PW) and go on at step 11.

3. Press the Off (Yes) button to clear the stored piece weight (PW) and set a new PW.
   ▶ The scale will display [PUT.20] (for example).

4. Choose the desired reference quantity sample by pressing the Mode F button briefly (decrement) or Unit (No) button (increment) to toggle the choices [10, 20, 50, 100, 200].

5. Press the Off (Yes) button to confirm reference sample quantity.
   ▶ If the pan is empty [PUT.PW] (put piece weight) is shown on the display.

6. Put the desired reference quantity on the pan or container and press the Off (Yes) button to store the reference quantity sample.

   ▶ If there are no reference samples put on the pan or the weight is smaller than 2d, the display shows [REF.ERR] (reference error) briefly.
If there are reference samples put on the pan, the display shows [PW OK] (piece weight ok) for 2 seconds then [CLR.LIM] (clear limit).

7. Press the [ ] (No) button to use the stored limits and go on at step 18.
8. Press the [ ] (Yes) button to set new limits.
   ▶ The scale will then display [SET.LOW] (set low limit).
9. Press the [ ] (Yes) button to set the low limit.
   ▶ The Display will show stored low limit with all digit blinking [000000] (in this example, 0 pcs).
10. Press the [ ] (No) button to edit the value.
    ▶ The first digit is blinking [00000].
11. Press the [ ] button to increase or the [ ] button to decrease the digit value.
12. Press the [ ] (Yes) button to accept and highlight the next digit.
    ▶ The 2nd digit is blinking [00000].
13. Press the button to increase or the button to decrease the digit value.
14. Repeat until all the digits are correct.
15. Press the (Yes) button to confirm.
   - The Display will show the low limit value with all digit blinking [000000] (in this example, 500 pcs).
16. Press the (Yes) button accept the low limit value.
    The scale will then display [SET.HI] (set high limit).
17. Same procedure like low limit setting.
   - The Display will show the high limit value with all digit flashing [00510.0] (in this example, 510 pcs).
18. Press the (Yes) button to accept high limit value.
   - The scale is ready for check counting application with new checklimit. Go on step 21.

In case the check limit values are wrongly set, [LIM. ERR] (limit error) will be displayed briefly followed by [CLR.LIM] (clear limit).
19. Repeat again the setup procedure.

20. Press the \textbf{\textlangle} Yes\textrangle\textbf{\textrangle} button to establish new check limit value or press the \textbf{\textlang} (No) button to use stored check limit value.

21. Place container on the scale (in this example, 109 pcs).

Taring the container on scale.

22. Press the \textbf{\textlangle} \textlangle\textrangle\textrangle button with \textbf{[NET]} appear beside the weight value.

23. Place sample in the container.

<table>
<thead>
<tr>

<td>Green LED lights up.</td>
</tr>
<tr>
<td>sample weight &gt; target range</td>
<td>Red LED lights up.</td>
</tr>
</tbody>
</table>
5.2.5 Average (Dynamic) Mode

Weight determination for unstable samples (e.g. living animals) or under uneasy environmental conditions.

**Note:**

Activation of this mode must be done prior via menu. See Chapter 6.2.1.

1. Place the tare weight (e.g. box, container) on the scale (in this example, 0.598 kg).

2. For taring the container on scale, press the button. [NET] appears beside the weight value.

3. To select the Average (Dynamic) mode, press and hold the button until [AVERAG] is displayed with application icon at bottom of the screen.
5 Operation

Compact Scale Puro® - Advanced

4. Place the load (animal) on the container.

5. Press the button to start measurement.

6. Remove the sample from pan.

Automatic | Semi-Automatic Mode:
Measurement will start automatically.
The countdown timer decreases in 1 second interval.

Manual mode:

5. Press the button to start measurement.
The countdown timer decreases in 1 second interval.
The average weight is displayed on screen.

6. Remove the sample from pan.

Automatic mode:
Countdown timer resets automatically, if the pan is unloaded for about 7 seconds.

Semi-automatic / Manual mode:

7. Press the button to restart.
5.2.6 Totalizing and Statistics Mode

The Totalizing feature enables manual or automatic totalizing of displayed values. Statistical data (total accumulated weight, min/max weights, pieces, percent and total number of weighing objects) is stored in memory for review and printing. Totalizing works in combination with each application mode except Average and Display-Hold. Totalization manual is set to ON by default.

5.2.6.1 Procedure on Setting up the Totalization Application

1. To enter into menu mode, press and hold the [M] button until [M.E.N.U] is displayed.

Release the button.

▷ The 1st menu item [APPLIC] shown on display.

2. Press the [ ] button to move to the next menu item or [ ] button to move to the previous menu item.

3. Change menu item until [OP.FUNC] (operating function) is shown on display.

4. Press [Yes] button to enter into sub-menu item.

5. Change menu item until [TOT.SET] (totalizing setting) is shown on display.
6. Press the \( \text{Off} \) (Yes) button to enter the displayed sub-menu, then select one option [OFF / AUTO / MAN] using the \( \text{Unit} \) button and store the selection with the \( \text{Off} \) (Yes) button.

7. Leave the setup menu with the \( \text{Menu} \) button.

5.2.6.2 **(Totalization) Displayed Values**

The Totalization Mode is active when \( \Sigma \) icon is displayed.

1. Put the first item on the scale.

2. Press the \( \text{Menu} \) button to add the weight to accumulation data (under manual mode).
   OR
   The weight value will add automatically to accumulation data once reading is stable (under automatic mode).
   The \( \Sigma \) icon will keep flashing until the weight is removed.

3. Empty the weighing pan.

   The item must be removed from the pan before the next item can be accumulated.

4. Put another sample on scale and follow same operation (Automatic or Manual mode).
5.2.6.3 Viewing and Clearing Statistical Data

The pan must be empty to view the stored statistics.

1. Empty the weighing pan.

2. Press the \( \text{Menu} \) key to display the stored totalizing data.

   The scale will display the statistical information in following order:
   
   Number of weighing done \( (N = 7) \):
   
   \[
   \begin{array}{c}
   N \\
   \sigma \Sigma
   \end{array}
   \]
   
   Totalized value \( (\text{TOTAL} = 5.225 \text{ kg}) \):
   
   \[
   \begin{array}{c}
   \text{TOTAL} \\
   \sigma \Sigma
   \end{array}
   \]
Minimum value (Min = 0.470 kg):

![MIN] 0.470 kg

Maximum value (Max = 1.485 kg)

![MAX] 1.485 kg

To clear the totalizing memory:

3. Press and hold the T button while the pan is unloaded and the totalizing data is displayed.
   ▶ The message [CLR.TOT] appears.

4. Press the (Yes) button to confirm or press the (No) button to cancel.

To verify the totalizing memory has been cleared:

5. Press the M button to display the statistical information.
Note:
- The item must be removed from the pan before the next item can be accumulated.
- Only stable weights are stored to totalizing memory.
- Changing the application mode will clear the totalizing memory.
- Gross loads and net loads cannot be added to the same total.
  - If the first load is a gross weight, following loads must also be gross weights.
  - If the first load is a net weight, following loads must also be net weights.

5.2.7 Display-Hold [D.HOLD]

Capture the first stable weight value. This value will stay on the display even after removing the sample.

Note:
Activation of this mode must be done prior via menu. See Chapter 6.2.1.

1. To select the Display-Hold mode, press and hold the [Mode] button until [D.HOLD] is displayed with application icon ~ appear at the left side of the screen.

![Display-Hold Mode]

Release the button. The application is activated.

![Application Icon Blinking]

2. Place the load on the scale (in this example, 0.192 kg).

![Load on Scale]

▷ Application icon ~ is blinking to indicate the value is hold on display.

If the load is removed, the weight value remains on the display.
3. Press the button to unlock the display hold (Application icon stops blinking).

Display hold procedure with tare function:

4. Place sample in container on scale (in this example, 0.534 kg).

![Image of sample in container]

The application icon is blinking.

![Digital display showing 0.534 kg]

_Blinking application icon indicates that the value is hold on display. The value remain on display even after removing the item._

5. Press the button to unlock the display hold.

![Button image]

_Blinking application icon will stop blinking._

6. Press the button to tare the container.

7. For successive weighing, (i.e. continuously adding samples to the container) (in this example adding 412 g, i.e. total weight become 0.946 kg), add sample to the container. Press the button to unlock the display hold.

![Image of sample in container]

![Digital display showing 0.946 kg]

_Application icon will short stop blinking._
6 Menu Settings

The User Menu (Menu Mode) allows the customizing of scale settings.

Note:
Additional Sub-Menus may be available if Interface Options are installed.
See Interface User Manual for the additional setting information.

6.1 Menu Mode

Enter into Menu Mode:

1. Press and hold \( \text{M} \) button until [M.E.N.U] is displayed.

   ![M.E.N.U](image)

   Release the button.

   ▶ The 1st menu item [APPLIC] shown on display.

2. To enter into menu item (in this example [APPLIC] - [WEIGH]), press \( \text{Off}(\text{Yes}) \) button.

   ![WEIGH](image)

3. Or press the \( \rightarrow \) button to move to the next menu item or \( \leftarrow \) button move to previous menu item.

   ▶ The 2nd menu item [METRO] shown on display.

4. When viewing the setting (in this example [METRO] - [STAB.RA] value 0.5d), press \( \text{Off}(\text{Yes}) \) button to Accept setting or the \( \text{On}(\text{No}) \) button to change setting. The current selection is signed by \( \text{⃗} \).
5. When [END] is displayed, press \(\text{ON} \rightarrow \text{OFF}\) (Yes) button to return to sub-menu selections.

6. Press the \(\text{NO}\) button to return to the first item in the current menu.

7. Press the \(\text{Menu}\) button to exit the menu.

### 6.2 Menu Navigation

Overview of Menu Mode options.

- **APPLIC**: Application (see chapter 6.2.1)
- **METRO**: Metrology (see chapter 6.2.2)
- **UNIT**: Weighing units (see chapter 6.2.3)
- **OP.FUNC**: Operation functions (see chapter 6.2.4)
- **PRINT**: Printer outputs (see chapter 6.2.5)
- **PRN.COM**: Printer port communication (see chapter 6.2.6)
- **PC.OUT**: PC output (see chapter 6.2.7)
- **PC.COM**: PC port communication (see chapter 6.2.8)
- **CAL.ADJ**: Calibration / Adjustment (see chapter 6.2.9)
- **INFO**: Information (shows serial number and type designation)
- **SECURE**: Block menu items (see chapter 6.2.11)
- **E.N.D.**: Leave menu

**Note:**

Some modes / units may not be available in all models.

### 6.2.1 Menu Selection [APPLIC]

Enter this menu to select application to be used.

Only activated units will be accessible with the \(\text{Mode}\) Button.

Default settings are identified by an "**".

**APPLIC**

7 Calibration and Adjustment

Enter this menu to perform calibration and adjustment of your scale.

Initial Calibration

When the scale is operated for the first time, a Span Calibration is recommended to ensure accurate weighing results. Before performing the calibration, be sure to have the appropriate calibration weights.

Adjust the GEO setting according to your location (see table 7.4).

CAL.ADJ
- CAL: Initiates a span calibration procedure (zero and span)
- LIN: Initiates a linearity calibration procedure (zero, mid-point and span)
- GEO: Geographical Adjustment Factor (GEO) is used to adjust the calibration based on the current location. (Settings from 0 ... 31, default 12)
- END: Leave menu level

7.1 [CAL] Calibration Procedure

Enter into Menu Mode:

Release the button.

▷ The 1st menu item [APPLIC] is displayed.

2. Press the [Unit] button move to next menu item or [Mode] button move to previous menu item.

3. Change menu item until [CAL.ADJ] is displayed.

4. Press [Off] (Yes) button to enter into sub-menu item.

▷ Sub-menu item [CAL] (Calibration) is displayed.
5. Press \(\text{On} (\text{Yes})\) button enter into sub-menu item.
   - \([0 \text{ kg}]\) is displayed. \([0]\) is blinking.

6. Empty the weighing pan.

7. Press \(\text{On} (\text{Yes})\) button to start zero point calibration.
   - \([-\text{C}--]\) is displayed while zero reading is stored.

The display shows the calibration weight value with all digit blinking \([00150.0]\)
(in this example, 150 kg)

8. For changing the calibration weight value, press the \(\text{No}\) button to edit the value.
   - The first digit is blinking \([.015.000 \text{ kg}]\).

9. Press \(\text{On} (\text{Yes})\) button to accept and highlight the next digit.
   - The 2nd digit is blinking \([0.15.000 \text{ kg}]\).
10. Press the \( \text{button} \) to increase or the \( \text{button} \) to decrease the digit value.

11. Repeat until all the digits are correct.
   - The Display shows the calibration value with all digit blinking [00100.0] (in this example, 100 kg)

12. When calibration weight value is correct, put specified weight on pan.

13. Press \( \text{button} \) to start span calibration.
   - [--C--] will be displayed while calibration weight is stored.

In case of any mistake during the calibration process [CALE] (Calibration Error) is displayed.

14. Remove the weight after finish.
   - The scale is ready for weighing.

7.2 [LIN] Linearity Calibration Procedure

Enter into Menu Mode:
1. Press and hold \( \text{Menu} \) until [M.E.N.U] displayed.

![M.E.N.U]

Release the button.

The 1st menu item [APPLIC] shows on display.

![APPLIC]

2. Press the \( \text{Unit} \) button move to next menu item or \( \text{Mode} \) button move to previous menu item.

3. Change menu item until [CAL.ADJ] shows on display.

![CAL.ADJ]

4. Press \( \text{(Yes)} \) button enter into sub-menu item.

5. Change menu item until [LIN] shows on display.

![LIN]

6. Press \( \text{(Yes)} \) button to start zero point calibration.

[0 kg] shows on display. [0] is blinking.

![0 kg]

7. Empty the weighing pan.

![Empty pan]

8. Press the \( \text{(Yes)} \) button to confirm.
The display shows the 1st linearization weight value (50% of scale capacity) with all digit blinking [00075.0] (in this example, 75 kg). This value cannot be modified.

9. Put the 1st linearization weight on the pan.

10. Press [Yes] button to start linearity adjustment at 50% of scale capacity.

The display shows the 2nd linearization weight value at 100% of scale capacity with all digit blinking [00150.0] (in this example, 150 kg).

11. Put 2nd linearization weight on the pan.

12. Press [Yes] button to start linearity adjustment at 100% of scale capacity.

[---C--] is displayed while reading is stored.
In case of any mistake during the linearization process [CALE] (Calibration Error) will be displayed.

13. Remove the weight after finish.
   ▶ The scale is ready for weighing.

7.3 [GEO] Geographical Factor Adjustment Procedure

The Geographical Adjustment Factor [GEO] is used to adjust the calibration based on the current location. (Settings from 0 ... 31 are available). Refer to table 7.4 to determine the GEO factor that corresponds to your location.

Enter into Menu Mode:

1. Press and hold \( \text{Menu} \) until [M.E.N.U] displayed.

Release the button.

▶ The 1st menu item [APPLIC] shown on display.
2. Press the \[ \text{Unit} \] button move to next menu item or \[ \text{Mode F} \] button move to previous menu item.

3. Change menu item until [CAL.ADJ] show on display.

4. Press \( \) (Yes) button enter into sub-menu item.

5. Press the \[ \text{Unit} \] button move to next menu item or \[ \text{Mode F} \] button move to previous menu item.

6. Change menu item until [GEO] is displayed.

7. Press \( \) (Yes) button to start GEO Factor selection.

8. If changing the value is needed, selection from 0 ... 31, press the \[ \] button to increase or the \[ \text{Mode F} \] button to decrease the GEO factor value.

9. Press \( \) (Yes) button to confirm GEO Factor value.

10. Press \( \) (Yes) button to return to sub-menu selections.

11. Press \( \) (No) button to return to the first item in the current menu.

12. Press the \[ \text{Menu M} + \] button to exit the setup menu and return to the weighing mode.
### 7.4 GEO Code Table

Minebea Intec

8 SBI Interface

You can enter certain commands to control weighing platform functions through the SBI interface. Each command starts with an escape sequence. The command is always closed with an end of command (EOC). The end of command can be any combination of CR and LF. Every data after EOC and before ESC will be ignored by the scale.

**Read displayed value:**

<table>
<thead>
<tr>
<th>ESC</th>
<th>P</th>
<th>EOC</th>
</tr>
</thead>
</table>

Answer (16 Byte):

```
V  W  W  W  W  W  W  W  E  E  E  CR  LF
```

V Sign possible characters: "+", ",", ","

W Weight Value possible characters: "0" .. "9", ",", ","

E Unit possible characters: "a" .. "z", "A" .. "Z", ","

CR Carriage Return ASCII 0x0D

LF Line Feed ASCII 0x0A

**Zero the weighing platform:**

<table>
<thead>
<tr>
<th>ESC</th>
<th>Z</th>
<th>EOC</th>
</tr>
</thead>
</table>

Answer: see special Response Commands

**Tare the weighing platform:**

<table>
<thead>
<tr>
<th>ESC</th>
<th>T</th>
<th>EOC</th>
</tr>
</thead>
</table>

Answer: see special Response Commands

**Special Response commands:**

There are some special response commands. These commands are used as standard responses. For example, error or confirmation. Special Response Commands always have the same size of 5 Bytes!

**OK**

```
1  2  3  4  5
O  K  !  CR  LF
```

The Scale confirmed the command execution without any errors.
The Scale has reported an Error during command execution.

The command can not be executed because the parameter is currently locked.
9 Maintenance/repairs/cleaning

9.1 Repairs

Immediately disconnect a defective device from the power supply.
Defective or damaged cables or screw connections must be replaced as a complete unit.
The seals placed on the device indicate that the device may only be opened and serviced
by authorized specialists to ensure trouble-free and safe operation of the device, and to
ensure that the warranty remains valid.

⚠️ WARNING

Improper repairs can pose considerable risks to the user.
- Repairs should only be performed by Minebea Intec authorized dealers using
  original spare parts.

9.2 Cleaning

9.2.1 Cleaning instructions

The device should be cleaned at regular intervals.
Disconnect the device from the supply voltage before cleaning.
Remove all traces of corrosive substances on a regular basis.
If the scale is located in a dry environment, then wipe the weighing platform using a
damp cloth.
Do not allow liquid to enter devices with an IP43 degree of protection.
The device may not be cleaned using a high-pressure or steam cleaner. Consider the IP
rating.
Condensation may form in the device if it is cleaned with water that is too hot or too cold,
due to temperature differences. Condensation may cause the device to malfunction.

9.2.2 Cleaning agents

⚠️ NOTICE

Some cleaning agents may not be compatible with the device material.
- Do not use cleaning agents for stainless steel parts that contain chlorine, alkalines,
  acetic acid, hydrochloric acid, sulfuric acid, or citric acid.
- The use of cleaning sponges made of steel wool is prohibited (e.g. S.O.S pads).
- Use a damp cloth or sponge to clean stainless steel parts on the scale (if present).
  You can use any commercially available household cleaning agent that is suitable
  for use on stainless steel.
**10 Disposal**

If the packaging is no longer required, please take it to your local waste disposal facility and/or a reputable disposal company or collection point. The packaging largely consists of environmentally friendly materials which can be used as secondary raw materials. It is not permitted—even for small businesses—to dispose of this product with the regular household waste or at collection points run by local public waste disposal companies. EU legislation requires its Member States to collect electrical and electronic equipment and dispose of it separately from other unsorted municipal waste so that it can then be recycled.

Before disposing of or scrapping the product, any batteries should be removed and taken to a suitable collection point. Please see our T&Cs for further information.

We reserve the right not to accept products that are contaminated with hazardous substances (ABC contamination) for repair.
# 11 Troubleshooting

The Table lists common problems and possible causes and remedies. If the problem persists, contact Minebea Intec or your authorized dealer.

<table>

### Application Package
- Weighing, Automatic tare, Percent Weighing, Parts Counting, Checkweighing, Accumulation, Dynamic Weighing, Display Hold, Automatic Print, Totalizing

### Weighing units
- kg, g, lb, oz, lb:oz

### Construction/material
- ABS plastic housing, stainless steel 304 weighing platform

### Ingress protection rating
- IP43

### Display
- Front and back LCD display with white backlight, 1.1 in / 28 mm height digits

### Checkweighing indicators
- 3 LED (yellow, green, red) with configurable operation and alert beeper

### Keypad
- 5 mechanical keys

### Zero range
- 2 % or 10 % of full scale capacity

### Tare range
- Full capacity by subtraction

### Stabilization time
- 1 second

### Auto-zero tracking
- Off, 0.5, 1 or 3 divisions

### Safe overload capacity
- 150 % of rated scale capacity

### Levelling components
- Externally visible level indicator and adjustable, non-slip leveling feet

### Power
- U_DC = 5 V, 2A, AC adapter or portable rechargeable lithium battery

### Battery operation
- Up to 210 hours operation time (with standard battery) between recharges with 12 hour recharge time

</table>

### 13.2 FCC Note

**Note:**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
